

Thank you for purchasing the Evenseed Squirrel Dilemma 104IN replacement part. The Evenseed technology allows you to feed more birds longer with three independent seed compartments. Also, Evenseed allows you to use different types of seed in the same bird feeder to attract different species of birds at the same time!

1. Place Middle Seed Compartment on top of Bottom Seed Compartment. Push firmly to secure tightly.

2. Place Cylinder Tube inside the Middle Seed Compartment until it sits on the Bottom Seed Compartment's hinged feet. Make sure the shortest end of the Cylinder Tube faces down.

3. Place Top Seed Compartment onto Middle Seed Compartment. Push firmly to secure tightly.

Please Note: If your Squirrel Dilemma Bird Feeder has a silver lid, then your bird feeder did not originally come with the Evenseed technology. This replacement part, 104IN, has been upgraded to include this feature. If you do not wish to use this feature, simply remove the cylinder tube and the two metal plates from the seed Compartments and discard. Your bird feeder now transforms into the original Squirrel Dilemma without the Evenseed technology.
