

Adjustable Platform Feeder

Assembly Instructions

Model #412

Step 1:

Assemble the dome to hanging rod by inserting the hanging rod (4) through (in this order) the locking bolt (9), dome (1), spring (2) and locking nut (3).

Step 2:

Assemble the base of the feeder by placing the grid (5) into the center of the base (6). Screw the hanging rod with attached dome into the grid by placing the nut (7) between the hanging rod and grid.

Once all nuts and bolts are firmly screwed in and assembled use locking bolt (9) and locking nut (3) in conjunction to adjust the baffle's height. This will allow you to raise and lower the baffle to your desired height.
